

SOFTWARE PROJECT HANDOVER CHECKLIST

This checklist ensures that all required technical assets are transferred to the Client upon completion of the software development project.

1. Source Code Transfer

- Full source code of mobile application.
- Full source code of website/web portal.
- Backend server source code.
- Access to code repository (Git or equivalent).
- Latest production build files.

2. Server and Hosting Access

- Hosting control panel login credentials.
- Server SSH access credentials.
- Database server credentials.
- Backup server configuration details.

3. Domain and DNS Access

- Domain registrar login access.
- DNS configuration details.
- SSL certificate information.

4. Application Deployment

- Production deployment instructions.
- Environment configuration files.
- Application build procedures.

5. Third-Party Integrations

- Payment gateway credentials.
- SMS gateway credentials.
- Push notification service credentials.
- API keys and integration documentation.

6. Database and Data

- Database schema documentation.
- Database backup files.
- Data migration scripts if applicable.

7. Documentation

- Technical documentation of system architecture.

- User manuals.
- Training videos or materials.

8. Security Credentials

- Administrator login credentials.
- API authentication keys.
- Encryption keys if used.

9. Maintenance Information

- Monitoring setup information.
- Backup schedules.
- System maintenance procedures.

10. Final Acceptance

- Confirmation that the system operates as per agreed scope.
- Confirmation that all credentials and materials are handed over.
- Sign-off by both Client and Developer.
